

## Senior Full Stack Software Developer

Kelowna, British Columbia, Canada · Full time

---

### Description

What if it was simple to meet new clients?

It has been our mission to help service businesses grow, and there has never been a time more important than now.

In just a couple clicks clients can launch powerful pre built Facebook ads, marketing, emails, and text messages that work like magic to help small businesses meet new clients.

StreetText has been on this mission since 2010 and we have only scratched the surface.

### Requirements

We are looking for a Software Developer with 5+ years of industry experience, who is passionate about full stack development, to join our growing Product team. This is a unique opportunity to shape the growth of StreetText.

As a Software Developer, you'll be responsible for not only building clean, effective, and scalable code across our growing SaaS platform, but also fostering individual, team, and cross-team relationships. You'll be responsible for mentoring developers by sharing your knowledge and experience. You'll help keep your team accountable by engaging in project planning and grooming sessions. Above all, you'll always be looking for ways to improve and help align teams to overall product strategy.

StreetText has a positive supportive culture—we look for people who are curious,

inventive, and work to be a little better every single day. In our work together we aim to be smart, humble, hardworking and, above all, collaborative. If this sounds like a good fit for you, drop us a line!

## **What you will be doing**

For the organization:

- Translating business objectives into technical requirements while considering overall strategies
- Collaborating with all teams to evaluate feature feasibility and project timelines by identifying priorities, rabbit holes, and unclear interdependencies
- Debugging issues across teams by identifying the root cause, considering multiple solutions, and making a logical recommendation
- Designing systems architecture, including infrastructure that enables continuous integration and delivery (CI/CD)
- Writing clean, scalable code while maintaining standards of security, reliability, performance, and quality
- Advocating for excellent and abundant testing to bring code coverage to an acceptable standard
- Offering constructive feedback through pull requests and team discussions while taking feedback gracefully
- Actively learning and seeking out ways to continuously improve

## **Skills needed**

- Experience in SQL/noSQL database design
- Experience in Object Orientated JavaScript
- Experience in Object Orientated PHP

Nice to have: Familiarity with Facebook's API

## **Benefits**

Competitive Salaries

Amazing co-workers

Office in downtown Kelowna

Flexible remote work

Company Laptop

Profit Sharing

Growth is one of our core values, if you love to grow personally, you will love working at StreetText.
